Compost & Seed

Superior's Compost Erosion Control Blanket combines nutrient-rich compost mixed with high-quality seed to create the perfect environment for quick vegetation establishment and slope stabilization.

Superior installs the compost with either seed mixed in (thin top-dress application), or incorporates seed into the existing soil, to build up the organic content of the soil. The stronger the organic content of the soil, the more erosion can be prevented.

Slinger & Conveyor Services

Superior Groundcover's slinger fleet allows us to quickly install various types of aggregate and even compost with precision up to 70 feet from the truck.

Compost and Seed services are best installed in early fall. Early spring is also good, but early fall is most ideal.

- Retaining Wall Backfill
- Landscape Beds
- Erosion Control
- Roadside Fill

Compost & Seed Benefits

- Increasing water infiltration into the soil surface
- Reducing runoff
- Increasing plant growth & soil cover
- Increasing water holding capacity of the soil
- Buffering pH levels
- New vegetation can be established in the compost

Seeded Blankets for Erosion Control

Erosion can wreak havoc for both property and the environment. There are many available solutions to these very real problems, but one stands out as an efficient AND environmentally-friendly option. Seeded blankets offer an immediate solution for holding soil in place, as well as a long-term solution for vegetation establishment. Put your erosion struggles to bed with erosion control blankets!

Vegetation establishment is the best way to prevent and control erosion. This is because plants have deep root systems that help hold soil in place. They also help slow the speed of runoff and can help reduce its effects. Sometimes, vegetation establishment is too slow a process to address emergency erosion issues. Seeded erosion control blankets are so useful in speeding along vegetation growth.

Superior's Compost Erosion Control Blanket combines nutrient-rich compost mixed with high-quality seed to create the perfect environment for quick vegetation establishment and slope stabilization.

Superior's erosion control solutions outperform traditional straw blankets, straw matting, silt fence, and other traditional erosion control methods. Compost offers natural erosion control and protection, adds organic matter directly to the soil, offers superior water infiltration, and increases aeration in any soil type. Be sure to check out all of our erosion control solutions!

Compost

Service Areas

We provide residential and commercial compost & seed throughout the West Michigan area including the following metros of West Michigan: Grand Rapids, Muskegon, Holland, Kalamazoo, Ludington, Grand Haven.

(616) 669-7479

Grand Rapids

10588 Linden Drive NW
Grand Rapids, MI, 49534
(616) 669-7479

Detroit
